

Connectivity

ECOTECHNICS

SIMPLY EFFICIENT

The dialogue between the workshop and the equipment

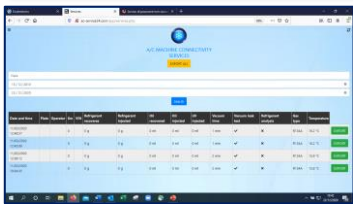

The digital world offers endless opportunities to integrate new solutions into the organization of the "connected workshop": an efficient and useful experience for the modern mechanic, aligned with future online services that help to increase the profitability of the workshop.

WIFI connection as a standard or optional feature has been implemented in the latest Ecotechnics climate stations. Current features include real-time A/C service status display on smartphones, tablets or PCs, station data such as available oil and gas, and exportable archive of performed services. A "work in progress" that will gradually see the implementation of additional features.

- Workshop's digital framework
- New organizational solutions
- New Marketing & customer experience
- Integrate equipment in digital information flow
- Remote control

www.ac-service24.com/app

- Application and registration in AC-Service24
- Activation in Setup Menu
- Display on smartphones, tablets or PC
- 6 languages
- Real Time will show what the A/C Station is actually doing (recovery phase, leak test, recharging ...)
- State machine as quantity of refrigerant total / available, tank temperature, A/C pressure, software and database version, last connection, maintenance ...
- Service Archive with detailed information about services done. Export of the archive (total or selected services) for the use in workshops administration, documentation or reports
