

Database update for completely automatic workflow

The Database update 2022 is available.

Only an updated database enables completely automatic workflow of the A/C station and avoids time-wasting research for refrigerant quantities. The new database is updated with most recent new models and updated information. The complete list of vehicles included in the 2022 database is available in AC-Service24

- **5.167** vehicles from **98** manufacturers
- 4.082 CAR, 922 AGRI, 164 TRUCK
- **18% new** models, **16%** with **updated** information
- CAR: **3.184** models for R134a, **898** for HFO
- Increasing **HFO** share: 22% of total vehicles, **57%** of vehicles built after 2015
- 90% with information on **oil quantity**, 92% indicates **oil quality**
- Models from 1970 up today. **42% are from 2010 on**
- The Database is European and Australian. During the menu-navigation you can select and show the desired geographical area.
- «Custom»: for customized databases or missing vehicles, the menu of the A/C Station is equipped with the «custom» button. This allows not to add, but to complete datas manually in specific directory offering the advantage datas will be maintained also with successive database update.
- Some car manufacturers install specific A/C systems on some versions of their cars. The quantity of refrigerant may vary depending on the system, the compressor manufacturer or in case of an additional condenser. According to the memory and the display type of the A/C Station, this information is shown directly on the display. Otherwise is given an index indicating this information. The legend of these indexes is available for download in AC-Service24.

News in 2022

5.167 models / 98 manufacturers

Models by refrigerant type CAR

Models with indication oil quantity

Models' history from 1970

Models by refrigerant type after 2015

Models with recommended oil quantity
