## Automechanika Innovation Awards 2024

150 participants were running for the Innovation Award

Record participation in 2024: More than 150 products were in the running for this year's Innovation Awards at Automechanika Frankfurt. This is the largest number of entries since the awards were launched. There were a particularly large number of submissions in the areas of workshop solutions, innovative parts, electromobility and AI.

Automechanika Innovation Awards 2024

## And the winner is ...

### Tru-Point 3D Positioning of ADAS Calibration Accessories

Using patented 3D camera measurement tech, TGT-05 enables precise placement of 360 mats around the vehicle. BKT-16 uses the same cameras to position rear radar fixtures within manufacturer tolerances. Targets are constantly monitored during the ADAS process to ensure repairs meet manufacturer specs.

## Great success on Automechanika

The new A/C Station for CO<sub>2</sub> (R744 refrigerant)

### The solution for R744 refrigerant

Snap-on Climate Solutions presents the new air conditioning service device for the growing workshop needs of specific maintenance and repair on R744 air conditioning systems.

The thermodynamics of R744 refrigerant differ fundamentally from the chemical refrigerants with new requirements for the air conditioning system itself and the necessary air conditioning service device. Particularly noteworthy are the **very high pressures of up to 130 bar** and further safety precautions to avoid increased CO<sub>2</sub> concentrations in the vehicle or in the workshop's working environment.

The CO<sub>2</sub> station has been developed for the specific safety and high-pressure requirements of R744 air conditioning systems. The device is distinguished by high-quality and **powerful components, future-oriented standard features** and extremely intuitive user friendliness via the 7" touchscreen. This keeps the machine the most future oriented highlight among R744 A/C stations.

Next CO<sub>2</sub> fair presentation: Las Vegas November 5 - 8

## ENVIRONMENT

### CAMPAIGN "NO PLASTIC"

Snap-on Climate Solutions aims always to reduce as most as possible environmental impact.

This important priority is found in the products characteristics, in their technical specifications and in work processes, logistic and internal organization.

The use of plastic bottles is of meaningful important environmental impact and is going to be excluded in the company.

A highly comfortable distributor for water gives you the choice among cold or room temperature, natural or sparkling water.

Of course, for all employees is available a quality insulated water bottle in line with company's identity.
