2025 AUGUST

WE MAKE SOLUTIONS EFFICIENT

We don't sell just products, we sell a professional program for A/C and ATF

ATF PROGRAM

The unique ATF station incorporates the most competent workflow settings carefully crafted by experienced ATF specialists in terms of hardware and software. With the desire to offer a range of adapters as great as the ATF station, Ecotechnics created the widest range of ATF adapters available individually or in recommended sets. The range has recently grown to 107 adapters.

The ATF database contains more than 90% of all vehicle models manufactured from 2000 onwards. You can reach the database directly on the station, on the online platform or wherever you are with the ATF MOBILE APP.

A/C EQUIPMENT

Any workshop is unique. The choice of suitable equipment must provide the service desired by respecting profitability and return of investment.

To meet perfectly workshop's needs, Ecotechnics designed 10 different A/C Stations. From high-end equipment for one or two refrigerants up to smart and convenient solutions.

Specifically designed for mobile use or the service on big systems are ECK LAND and ECK BUS PRO while the future oriented CO2 refrigerant meets the best Premium solution ECO₂R744.

A/C ACCESSORIES

Ecotechnics offers all you need for a professional A/C Service: accessories, consumables, leak detection and items for regular maintenance.

The focused selection of only 3 of most popular PAG and POE standards of compressor oil and dye can cover more than 95% of market needs.

The Gas Analyser represents the best solution to manage the risk of contaminations, is easy to install, detects percentages of components and excludes possible contamination.

Many other highlights are remarkable as the diagnosis sight glass, the outstanding efficiency of the Flushing Kit or the "little helpers" as Swift couplers for extension to keep connections smart.

ACCURACY AND EFFICIENCY

The standard for recovery and filling control

Workshops look for fast, precise and efficient equipment.

The standard defined in SCS represents a perfect balance of accuracy and efficiency maintaining high speed of workprocesses.

Snap-on Climate Solutions has gained considerable experience in the commercialization of air-conditioning stations designed according to the most restrictive market standards such as the American SAE regulations.

To constantly monitor the performance of the stations, the company has developed internal product standards focused to monitor the parameters of Recovery Efficiency and Refrigerant Filling Accuracy. Periodical tests are always performed under the same conditions in terms of climatic condition, temperature, measuring instruments and procedures.

Moreover, based on technological development and constant improvement, the company reached Efficiency and Accuracy results that exceed those required by universally accepted standards. An example is the patented feature of the Vacuum Assist that has allowed to pass the homologation tests with ETL in the USA.
