## The great ATF adapter range becomes even bigger

### 10 new adapters

With the desire to offer a range of adapters as great and unique as our ATF machine, we created the widest range of ATF adapters to best focus and suit the European vehicle parc.

A constant work in progress to optimize best possible coverage. The actual range of 76 adapters and 21 oil level connectors, considered the widest available, is now further enriched by 10 additional adapters.

These new adapters are carefully selected to offer most efficient solutions on some popular models requiring ATF service and, further, to offer new tricky solutions on some specific models.

### Please remember the LEVELKIT

The kit contains 20 connectors (from ATF101 to ATF120) to facilitate the top-up for correct oil level on most popular European vehicles.

Unless the car is connected during an ATF cleaning and oil replacement service, this control can obviously be performed directly with station's service hoses.

But to check the level after a test drive or in any other circumstance by disconnected gearbox, these connectors enable quick and easy top-up.

### Optimization

#### ATF base and advanced Kit adapters

The adapters **A31**, **A50** and **A55** are required for some of the most popular automatic vehicles in Europe. Therefore, these adapters are shifted from the ADVANCED KIT to the BASE KIT, now composed by 21 instead of 18 adapters.

The adapters **A52**, **A57** and **A72** are rather frequently required and now selected for the ADVANCED KIT. Total quantity included in the ADVANCED KIT remains 18 adapters.

### The full up-to-date adapter list

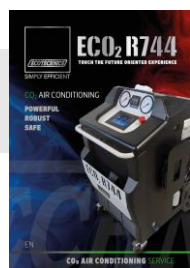

The complete updated list of all adapters and oil level connectors gives clear overview on the whole range.

The possible belonging to one of the kits or professional suggestions is indicated in color and keeps your selection easy.
