## ATF PREMIUM KIT ADAPTERS MAXIMUM COVERAGE IN ONE ONLY SOLUTION

This selection of 46 ATF adapters optimizes the coverage for most vehicles with automatic transmission. The highly effective solution for the workshop: in combination with the content of the ATF BASE KIT, the PREMIUM KIT reaches a coverage of more than 70% of vehicles.

The adapters are inserted in a dedicated case. Each compartment is labeled with the corresponding adapter number for easy identification.

**DECKKIT.ATF.PR02**

## TOP RECOMMENDED ACCESSORIES MUST HAVE FOR A PROFESSIONAL A/C SERVICE

A professional service in the workshop requires further to the equipment also accessories, consumables, leakage control solutions and items for regular maintenance. Ecotechnics offers a complete range of accessories and consumables to guarantee safe and suitable solutions.

Accessories are presented in the catalogue from page 30 to 35 and on-line. Have a look to our on-line catalogue in home page [www.ecotechnics.com](http://www.ecotechnics.com) Further, any individual product brochure on-line includes also the top recommended accessories for each station.

## GT SHOW Suzhou 2026 China's Premier Automotive Culture Exhibition

The GT Show Suzhou 2026 has been held from March 27 to 29. In addition to exhibiting legendary models and supercars, this event represents a key pillar for both automotive enthusiasts and aftermarket professionals.

Air conditioning of our distributors has been represented mainly by the premium positioned and fully equipped **ECK 4012** and the bestseller "Top solution for both refrigerants" **ECK TWIN 12**. Even the smart and flexible solution **ECK 1900 PRO** attracts efficiently interest and results. Noteworthy is the frequently required combination of our station with the **Flushing Kit** as most efficient solution to clean the system or its components.

### The A/C Service Trend, China: Global Transition to Low-GWP Refrigerants

*The global regulatory transition goes on:  
"Even in China refrigerant with GWP lower than 150 will be mandatory by 2029 July 1st."*

The global regulatory transition goes on eliminating refrigerant gases with a high environmental impact, such as hydrofluorocarbons (HFCs). As in Europe since 2017, regulatory framework for vehicle cooling and heating systems in China is now accelerating this process, imposing strict limits on global warming potential (GWP) and promoting natural or low-impact alternatives. Mainly R134a (GWP 1.470) is going to be substituted by HFO1234yf (GWP 4). Other solutions as R744 (GWP 1) complete the transition. The possibility of refrigerant configuration during activation is the best possible logistic solution and confers SCS again an extraordinary competitive advantage for OEM and independent workshops.
